

## Goverlan Remote Control Selected as a 2006 Product of the Year by SearchWinComputing.com

### Goverlan Remote Control v6.5 Takes Bronze Award in the Remote Control Software Category

MIAMI, FL -- (MARKET WIRE) -- 01/16/2007 -- The 'Products of the Year' awards are presented by the editors of TechTarget's Windows Media Group. Each product entry was reviewed by the [www.SearchWinComputing.com](http://www.SearchWinComputing.com) editorial staff, in conjunction with a team of users, industry experts, analysts and consultants. Winners are selected according to innovation, performance, ease of integration, ease of use and manageability, functionality and value.

According to the award description, judges were impressed by the software's flexibility. [Goverlan Remote Control v6.5](#) is equipped with an automatic agent for deployment and maintenance as well as a global configuration setting. This allows administrators to use the product from the start without requiring their company to spend time and money on implementation. Administrators can also control multiple machines simultaneously. When doing so, each remote control session is nested within their own tab in the workspace, which can be reorganized in many ways.

Because [Goverlan Remote Control](#) is designed to be implemented effortlessly and securely in the enterprise it has been adopted by large organizations throughout the world as their enterprise-wide remote control solution. [Goverlan Remote Control](#) is also a favorite because of the end-user experience it provides. Its convenient and pleasing interface is intuitive while permitting multiple remote control sessions to be active simultaneously.
